ABOUT ME

IT Operations Engineer transitioning to DevOps with 1.5+ years of commercial IT experience. Strong foundation in Linux administration, cloud (AWS/GCP), and infrastructure automation. Hands-on practical experience in containerizing applications with Docker, deploying them to Kubernetes, and building automated CI/CD pipelines (GitHub Actions)

SKILLS

- **Infrastructure & Cloud** AWS (basics), GCP (familiar), Active Directory
- **Containers & Orchestration** Kubernetes (k3s, kubectl, Deployments/Services/Ingress), Docker
- **CI/CD** GitHub Actions, ArgoCD, Automated Deployment Pipelines
- **Infrastructure as Code (basics)** Terraform, Ansible
- **Monitoring & Observability** Prometheus, Grafana, Loki, Node Exporter, Alertmanager
- **Scripting & Automation** Bash, Python, n8n Workflows
- **Security & Access Management** ZTNA, MDM, EDR, IAM, SSH, Firewall (basics)
- **Databases** MySQL, PostgreSQL
- **Tools** Git, Jira, Confluence, Google Workspace
- **OS** Linux (primary), macOS, Windows Server (familiar)
- **Language** English — Upper-Intermediate

EDUCATION

Kyiv Aviation Institute

Bachelor's degree, Cybersecurity and Information Protection

EXPERIENCE

Help Desk Engineer

Tranzzo · Full-time · Hybrid, Kyiv

Feb 2026 – Present

- Automated employee lifecycle management via n8n and Python scripts, integrated with AD/LDAP, reducing manual IT operations time by 40%
- Deployed and maintain ZTNA solution for secure remote access across the organization
- Manage MDM platform administering 150+ corporate endpoints with automated policy enforcement
- Manage RDP-based remote access to GCP VM instances; configure firewall rules, OS Login, and IAM role assignments enforcing least-privilege access control
- Operate EDR solution monitoring endpoint security across the organization
- Administer user access to internal systems enforcing least-privilege principles
- Maintain corporate network infrastructure and develop internal IT documentation

Technical Support Engineer

UniTalk · Full-time · On-site, Kyiv

Nov 2024 – Jan 2026 · 1 yr 3 mos

- Provided L1/L2 technical support resolving hardware, software, and network issues (Windows/macOS/Linux)
- Managed user accounts, access rights, and licenses via Google Workspace and internal CRM systems
- Maintained and monitored office network infrastructure (Wi-Fi, VPN, Routers)
- Automated routine administrative tasks using Bash scripts
- Maintained technical documentation and asset inventory tracking
- Centralized and monitored system/auth logs using Elastic; configured alert rules for anomalous login patterns and policy violations

HOME LAB

Hybrid Cloud GitOps Infrastructure (AWS & Local k3s)

- **Kubernetes & Docker:** Containerized Python (Flask) and Node.js applications using Docker. Deployed and managed them in a k3s cluster using kubectl, configuring core resources including Deployments, Services, and Ingress.
- **CI/CD (GitHub Actions):** Designed and implemented automated CI pipelines to build Docker images and push them to GitHub Container Registry (GHCR) upon code changes.
- **GitOps (ArgoCD):** Implemented continuous delivery (CD) using ArgoCD for automated synchronization and self-healing of cluster state from the Git repository.
- **Cloud & IaC (Terraform/Ansible):** Provisioned AWS EC2 instances, Security Groups, and Key Pairs via Terraform. Automated OS configuration and Docker installation using Ansible Playbooks.
- **Observability:** Deployed Kube-Prometheus-Stack, configured custom PromQL metrics, and set up automated HTML Telegram alerts via Grafana Alertmanager.
